Dear Spaceframe,

I am writing to show my sincere gratitude for all of you. Spaceframe Construction & Engineering were awarded the construction management contract of our Emerson Electric (Tongling) New plant in Anhui Province, in 2016. With the hard work of Alvin and his team, the project succeeds meeting the specification and achieving good quality under a very tight schedule.

This is not an easy project that it covers 12096 sqm and includes manufacturing, two floors office, ancillary room, associated roads, driveways, parking, guard houses and landscape. Which is also a complex project, includes civil, steel structure, decoration, HVAC, electrical, fire protection, also including electroplating, sintering, pickling and chemical pollution. Most challenge is the schedule is very tight. We should get this done within 5 month while your team made it which amazed all of us. I would like to take this opportunity to thank Spaceframe, PM Alvin Liu and his team for their effort and accomplishments in contributing significantly to the overall success of this project.

Thanks again! Good job!
