To Whom It May Concern,

RE: Spaceframe Structural Steel Supply

Jaytex Constructions have been working with Spaceframe since 2018, during this time they have successfully delivered the structural steel component for two mid-sized (100-150t) projects here in Darwin, Australia. We have found Spaceframe to be incredibly professional in all our dealings with them, they take pride in their work and deliver very good after sales support and service.

During the detailing and fabrication stages Spaceframe provide in depth reports each week that allow us to follow the process with confidence, their QA has also been in accordance with Australian standards including the use of SGS for NDT and DT on request.

We have no reservations in recommending Spaceframe as a high-quality structural steel fabricator and look forward to working with them again in the future.

Should you have any queries, please do not hesitate to contact the below.
